Proposer	Trivolve Tech Pvt Ltd
Amount	9,600,000 ADA
Timeline	15 months
Administrator	Cardano Foundation
Value Proposition	The Police Force Management System (PFMS) secures police evidence across five stages by hashing records onto the Cardano blockchain. It provides tamper-evident proof for the judicial system. PFMS is projected to boost Cardano mainnet transactions by ~18.2% while returning 70% of verification revenue to the Treasury, 20% to core Cardano library maintenance and 10% to the Proposer.
Deliverables	• Design, development, and deployment of PFMS solution. • Secure read only connectors and edge agents for existing systems. • Mainnet load proving (100,000 transactions from live sources). • Open-source release of the PFMS core codebase as a public good under Apache 2.0 license.
Benefit to Cardano	• Projected 1.5 million mainnet transactions in Year 1, growing with wider adoption. • Contributes 70% of revenue to the Cardano Treasury and 20% to the ongoing maintenance of core Cardano libraries. • State government committed to covering transaction and infrastructure costs. • Reusable open-source core for other projects without additional Treasury funding.
Administration	The Cardano Foundation will serve as the constitutional administrator. The delivery against milestones will be publicly visible via a public dashboard. All funds not disbursed by the end of the timeline will be returned to the Cardano Treasury.
Risk Management	Key risks include access to state police data systems and continued state government support, delivering the five-stage pipeline within 15 months, and ADA price volatility. These are mitigated by acquired data feeds from the state, prior successful mainnet deployments of core technology within the planned timeframe despite ADA price volatility, and a strict USD 0.30/ADA expenditure cap.
